ABSTRACTED-PUB-NO: EP 505294A

BASIC-ABSTRACT:

The vacuum-sealed pack for food products, especially for cooked or processed meats in interleaved slices (3) has a layer of interleaving material (4) between adjacent slices which are laid out in the pack so that they overlap one another and the edges of all slices and interleaving layers are visible. Each interleaving layer has a corner-piece (4e) by which it can be lifted to separate one or more slices of the food product, which are laid out in a flat tray (1) and then covered with a layer of transparent plastic.

The interleaving material can be either of polyethylene or polypropylene, with a thickness of 40-60 microns, and the dimensions of the interleaving sheets are between 50 and 90 percent of the area of the food slices.

ADVANTAGE - Improved presentation and easier handling.
